DATA 551 Project Presentation Guideline

Each group has 15 min time for their presentation and QA. Schedule for 10-12 min presentation and 3 min for QA. While a group has ended their presentation, the next group should start setting up their work.

What to present?

Think that you are selling your work, or advertising your great visualization dashboard for an employer in the related field. Explain:

- What is the problem that you have selected for visualization and why did you select it? What is its importance?
- What are the questions you are exploring through this dashboard (i.e., your research questions).
- Include information about the dataset and its size.
- Present your dashboard and go over some charts and results.

You can include 2-3 slides to explain the first three bullet points. But consider that it should not take more than 2-3 min. The rest of your presentation is about presenting your dashboard and its interactivity. Showcase your dashboard, how we can interact with it, and even mention some results for the asked questions.

ALL group members should get a chance to talk and present. This is a good practice to present your work in front of an audience.

I will cut the presentations if they go over 12 minutes. Please practice and plan your presentation accordingly.
